

# Port:80 A “Home” Shifting Website

## 1. Introduction

- It is a website which will provide home shifting services from packaging to transportation.
- This can help an end-user to quickly search through the various home shifting services provided in his/her area and their respective prices.

## 2. Design and Implementation

The screenshot displays the Port:80 website. The top navigation bar is blue with links for Home, Book, About, and Contact, and a Login button. The hero section features a teal background with the Port:80 logo and a description of services. Below this is a search form with fields for location, date, and a list of items, along with a Submit button. The background image shows two movers in blue uniforms loading a white sofa into a van.

Submit

- This project uses the bootstrap library to provide design features like navbar, breadcrumbs navigation etc..

## 3. Conclusions

- This project has helped me to practise the skills taught in this course.
- Features of this project have been discussed in the design section. Now the remaining part of connecting it to the backend will be completed after I learn more.
